LIONS

POWER AND STRENGTH

The lion is one of the most popular animals on earth. The animal is a symbol of power and strength.

But today there are only about **23,000** lions left in the wild, and their numbers are declining rapidly.

One of the biggest threats is habitat loss. The lion is losing much of its natural home due to humans clearing land for farms and cities.

Lions are often hunted by humans for their fur, meat, body parts and for sport.

Climate change is also contributing to lion populations fading. In order for the lions to survive, they must adapt to the changing ecosystems and extreme weather conditions, such as floods, storms and droughts.
